In this semester my goal is to learn and get better with the new tools we are using and improve my skills in the coding part. I also want to ask for more feedback so I can always improve my stuff.

So far, I have asked for feedback of my portfolio and the ux design assignment we had the first week of the semester. I have also played with photoshop as well to understand it better.

What I learned:

Asking for feedback is always helpful to improve even if you sometimes don't get the feedback, you want that a way of motivating you to work more and improve my skills

How I think it went:

I think until now it's going good the feedback I have gotten have helped me improve my portfolio and my skills as well

today i spoke to Berry about my portfolio and what i change and my inspiracion>i showed him also the color pallet i wanna use.He told me that i could do a contrast with like a orange color and i said that was my idea aswell for the logo. i also showed him what i have been doing on photoshop he said im doing good that i keep playing with it asswell he showed me some stuff that i could use aswell in photshop.he also showed me how the ai genarated works.

Write a summary of what you discussed with your teacher...

Post feedback

Checkpoint 2 Portfolio review 1 11-03-2024 🔒
