In this assignment I had the task to make a box jump and change colour between blue green and yellow. With animation in CSS using keyframes.

What I learned:

In CSS learned how the animations works and how the keyframes work as well. I found it really cool how the animation works.

How I think it went:

I think personally that it went well I learned until now some new stuff and understood more how keyframes work and animations. I still think I have a lot of room to improve on development and by making more project I will get better.

```css
@keyframes bounce{
    0%, 100%{
        transform: translateY(0);

    }
    50%{
        transform: translateY(-20px);
        background-color: ◻green;
    }
    25%{
        background-color: ◼yellow;
    }

}
.element{
    width: 50px;
    height: 50px;
    background-color: ◼blue;
    animation: bounce 2s ease-in-out infinite;
}
```
